Implementation Date: On or after January 15, 2018

Planned Network Change(s) will occur at the following locations: Kongiganak, Alaska

Description of the planned network change(s): United Utilities, Inc. ("UUI") intends to retire all of its copper transmission facilities between the Kongiganak wire center and all customer locations in Kongiganak, Alaska after which it will be providing services over a newly constructed fiber network. This network change is precipitated by the need to move a line of utility poles in Kongiganak to which UUI's existing copper lines are attached. Construction of the new pole line and deployment of the fiber facilities that will be attached to that pole line are planned to begin this summer. The existing pole line and the attached copper facilities will be removed on or after the implementation date set forth above.

Description of reasonably foreseeable impact(s) of the planned change(s): After the retirement of the copper facilities, UUI will: (1) no longer offer services over copper facilities; and (2) remove the copper facilities.

Description of any changes in prices, terms, or conditions that will accompany the planned change(s): The retirement of copper facilities described above will not result in changes to rates, terms and conditions and UUI will convert all of its customers' services to a like-for-like service provided over the newly constructed fiber facilities. UUI is not making any changes to the trunk-side of its switch and interconnecting providers will not be directly affected by the network changes described above.
